

Product Substitution Announcement: 722GE ONTs for 721GE ONTs

To meet customer requested ship dates, Calix will be substituting the 722GE ONT (2 POTS, 2 GE, 1 RF/HPNA) for the 721GE ONT (2 POTS, 2 GE, 1 RF). The 722GE ONT is currently in stock. The 721GE ONT is currently out of stock with extended lead times.

The 721GE and the 722GE use the same electronics packaging and they have the same service ports and connections. The 722GE has additional functionality compared to the 721GE for the HPNA feature. This feature does not impact the base 721GE ONT features and does not impact the provisioning.

Calix OLTs use an ONT provisioning profile to identify the minimum service ports and features for the ONT. When an ONT is installed, the OLT verifies that the ONT supports all features and service ports defined in the profile. A 722GE ONT is compatible with a 721GE ONT provisioning file because it has a superset of features compared to the 721GE. The 722GE meets the requirements defined in the 721GE profile. The additional HPNA feature does not impact provisioning and does not generate an equipment mismatch alarm.

The 722GE ONT can be used during initial turn-up with a 721GE profile. The 722GE ONT can also replace a 721GE ONT that uses a 721GE profile.

The following Calix product part numbers are impacted by the substitution:

Product Item Number	Product Description	Substitute Product Part Number	Substitute Product Description
100-05163	721GE ONT, 2 POTS, 2 GE, 1 RF	100-05164	722GE ONT, 2 POTS, 2 GE, 1 RF/HPNA

During the substitution period, Calix will be working with customers to transition 721GE orders to 722GE orders to meet requested shipment dates. For additional information regarding this announcement or the substitution product, please contact your Calix sales representative.
